

Personal websites with Github

Alyssa Willson

2026-04-03

Overview

- Intro to Git and Github (20 min)
- Short demo (10 min)
- Work on your websites in breakout rooms (45 min)
- Conclusions (15 min)

Why making a personal website?

- Online presence
- Portfolios
- Job applications

Introduction to Git, Github, Github Pages

Git and GitHub

- Git is a version control system that tracks changes to files in a project over time.
- GitHub is a web hosting service for the source code of projects (software, web development, other text based projects) that use Git.

Github account looks like this:

Git and GitHub

- Repositories = Project
- Repositories can be cloned or forked
- Repositories can be private or public
- We use it for:
 - Collaborative Science
 - Back-up code (collaboration with your future self)
 - Your SPEC School final project
 - Webpages!

“Using a Git commit is like using anchors and other protection when climbing... if you make a mistake, you can’t fall past the previous commit.

Commits are also helpful to others, because they show your journey, not just the destination.”

-Hadley Wickham & Jenny Bryan

Git and GitHub resources

- GitHub Docs: <https://docs.github.com/en> and <https://skills.github.com/>
- Library Carpentry lesson on GitHub: <https://joshuadull.github.io/GitHub-Desktop/>

- Alternative to GitHub: <https://www.atlassian.com/git/tutorials/learn-git-with-bitbucket-cloud>
- <3 Happy Git and GitHub for the useR: <https://happygitwithr.com/>

GitHub Pages

- GitHub Pages are public webpages hosted for free through GitHub.
- One personal website allowed per user.
- Many ways to build your personal website:
 - From scratch (examples: <https://jmcglone.com/guides/github-pages/> and <https://blog.devgenius.io/how-to-create-a-personal-website-with-github-pages-7a29abc4a02b>)
 - Using a static site generator: Tool that generates websites using templates (themes)

Themes:

- General:
 - <http://jekyllthemes.org>
 - <https://themes.gohugo.io>
 - Huge list here: <https://myles.github.io/awesome-static-generators/>
- Academic Themes (website | github repo):
 - Academic Pages | <https://github.com/academicpages/academicpages.github.io>
 - Hugo Themes-Academic | <https://github.com/>
 - Dr. Jekyll | <https://github.com/tyler-abbot/DrJekyll>

Examples:

- Antonio Guzman: <https://www.jaguzmanq.com/>
- Casey Youngflesh: <https://www.youngfleshlab.com/>
- Ny Aina Rakotoarivony: <https://nyainarakoto.github.io/>

Demo

- Academic Pages | <https://github.com/academicpages/academicpages.github.io>

Steps

1. Select a theme (here, we're using academicpages)
2. Go to the github repo of the theme
3. Fork the repository
4. Change name of repo to username.github.io
5. Set configuration, content, and data

You're all set!

Steps: 1. Select theme

Steps: 2. Fork repository

Steps: 3. Change name of repo

- Update website and description

Steps: 4. Set the configuration and data

- Locate the configuration file (`_config.yml`) and edit it by replacing the default variables with your own info. To edit the file, click on the pencil icon on the top-right. Commit!
- Go to `_data` folder and change the `navigation.yml` file to fit your needs

- Go to _pages folder and edit the about.md file
- Keep editing the markdown files until your website is ready!

Breakout rooms

- Your turn!
- 45 min
